Please join us at the SARES Quarterly Meeting, Wednesday, **June 25**, from 7:00 PM to 9:00 PM at the Public Safety, 700 All America Way, upstairs classroom. Our guests, **Mark Strobin** and **Brian Tentinger** from **The National Weather Service (NWS)** will talk about the local **Weather Spotter Program**. According to statistics 90% of all presidential declared disasters are weather related, leading to around 500 deaths and nearly \$14 billion in damage. The Doppler Weather Radar is a great tool for detecting and tracking storms. However, NWS meteorologists also depend on real-time reports from trained spotters to know exactly what is occurring on the ground under a storm. The NWS trains people to identify severe storms and report them via an organized communications networks (primarily local and county emergency management, law enforcement and amateur radio). Please plan on attending this very important meeting and find out how you can help your community and work with the NWS at the same time.
